

Mir

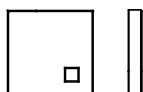

Marco Acerbis - 2017

A formal frame: this is a mirror which combines a visual aspect, created by the balance between the flat mirror and the empty volume of the coloured box, and a functional one created by the mirror's frame which doubles as a shelf.

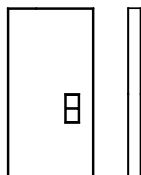

Available models

Wall mirror with frame in extruded aluminium. MDF glove box. The colours of the frame and the shelf can be freely combined together. The fixing system to the wall allows to point the mirror in different ways, changing also the position of the glove shelf. The frame is drawn up for the integration of a LED light to be put around the outside perimeter into a compartment with a lid in opaline polycarbonate. LED strip Kit (optional).
